100% ALL Natural Northeastern Blue Tilapia™

Instead of marketing fish with an organic label, we have to use words like "All Natural" and "Farm Raised" on the packages instead. Of course, none of this stops the seafood manager at the grocery store from mis-interpreting either of those terms to mean organic, and then simply making a sign that reads "organic tilapia" to sell his fish.

When it comes to making personal choices between wild caught and farm raised, **consumers should always choose farm raised from US sources.** Whether you believe it or not, we humans have polluted our waterways with raw and treated sewage, petroleum products, fertilizer, pesticide runoff, and a whole host of other toxins.

Fortunately, the water used for **American** farm raised fish, such as tilapia, is treated to a high standard of cleanliness. American farms are inspected under FDA guidelines, and the stock is tested for disease.

In addition, the fish are fed a nutritionally complete diet designed to keep them healthy. By all accounts, tilapia from American farms easily qualifies as organic, but the US Department of Agriculture owns all the rights to, and is the only agency that can sanction the word "organic" on any food label. So at least for now, organic seafood remains a myth.

Our water is from our own deep well filtered, UV sterilized, and filtered again. From there the water goes to our tanks.

Our tank water then goes through our second filtration system, which consists of pump, filter and another UV sterilizer then back to the tank which aerates the water so there is plenty of oxygen in the water.

Who is Tilapia R Us?

Tilapia R Us & Crossover Farm is a veteran owned and operated company. Established in 2013.

Tilapia R Us has three patent pending's and consults with local FFA, 4H chapter's and farmers.

We are the only company in the USA that breed and raise 100% ALL Natural Northeastern Blue Tilapia™, plus we do this all indoors.

Our facility is about 4200 sq. ft. with specialty designed heated tanks that are kept at 82 degrees Fahrenheit all year long. When we state NATURAL, we are not talking Organic. Organic crops can be sprayed with chemicals and still be called organic.

Natural means anything fed to our fish and has NO chemicals, NO GMO's, or chemical bi product. With this in mind, when you purchase one of our products our guarantee states we sell only natural certified products.

Our products are not touched by hands until you receive them. We wear protective gear to keep our product as natural as possible.

Tilapia R Us is the facility where we breed and raise Northeastern Blue Tilapia™. Our address is Hamburg, but we are in Shartlesville.
Tours available, call to schedule time

Is aquaponics organic?

Aquaponics is a completely natural process which mimics all lakes, ponds, rivers and waterways on earth.

The only input to an aquaponic system is fish food. The fish eat the food and excrete waste, which is converted (by beneficial bacteria) to a form that that plants can use.

In consuming these nutrients, the plants help to purify the water. You can not use herbicides, pesticides or other harsh chemicals in an aquaponic system, making the fish and plants healthful and safe to eat.

Tilapia Tea Soil Booster

This product is unique Non-GMO, No chemicals. Beneficial Bacteria fortified with its own food source...it works!

100% all-natural liquid Tilapia poo water. Makes a great soil booster to help your plants and grass grow.

Tilapia fish poo has a balanced blend of nitrogen, phosphorus, nitrites, nitrates and potassium to enrich your soil and grow healthy plants.

You can use this product to water your plants, garden and your lawn with 100% natural liquid nutrients.

"Helping your plants while helping the environment!"
